Thank God something is finally being done with microslloth. I am for anything that breaks microsuck's back. Please make it real. make them give out the API's and tell them to stop messing with Java. Install Netscape on every new pc, let OEM's put on what they want. microslloth is just a proprietary os. Can you believe that they wanted to tell the doj what their punishment is to be? Everywhere you look is microsuck this or that. . .

thanks for your time

Jim Dyson
